(54) METHOD AND DEVICE FOR ADVANCE NOTICE OF CHARGE RATE

(57) Abstract:

PURPOSE: To attain the communication service offered by the public PHS service to the user in a public PHS(personal handy phone system) service terminal moving into the area of a private communication system.

CONSTITUTION: When the user makes communication by using a public PHS terminal equipment PS 1, a control section 7 reads a charge rate from a charge information management equipment 13 by a charge rate advance notice request from a private communication system 3. Then the section 7 acquires the charge notice method/rate approval method from a line information table 12 and sends the charge rate by a voice guide using a control signal/voice guidance transmitter 9 to the private communication system 3. When the user uses the PS 1 and replies the presence of the approval of the charge rate, since a control signal/PB signal is sent from the private communication system 3, the control section 7/PB signal receiver 10 confirms the approval to start call connection processing.
